

# Navigating to a what3words address with the free app

In a first aid emergency you may receive a what3words address in one of these formats:

1. As a link, i.e. [w3w.co/parent.green.robot](https://w3w.co/parent.green.robot)  
Click this to open the what3words map and view the exact location.

2. Three words said over the phone or radio, or written in a text message.  
Open the app, enter the three words into the search bar at the top of the screen, or tap the microphone icon and say them. Select the correct what3words address from the results displayed.

Now you can get directions to that precise location:

1. Tap 'Navigate here' and select your preferred navigation app.

2. The what3words address will convert into GPS coordinates and open in your chosen navigation app.

If you need a member of the public to give you their current what3words address, share the following message in an SMS or over the phone::

To help us find your exact location, click the link: [findme.w3w.co](https://findme.w3w.co)

Read the 3 words that display at the bottom of your screen.
